The protectionist paradigm

“the flood of information stimuli and exhortations conveyed by sound and image by which the pupil is assailed outside the school through posters, cinema, television, strip cartoons, radio and popular songs”.

Primary Curriculum Handbook 1971
The participation paradigm

“It involves the active involvement of children in learning process that is imaginative and stimulating. Its overall vision is to enable children to meet with self-confidence and assurance the demands of life both now and in the future”

The Primary School Curriculum 1999
We live in a world where media are omnipresent: an increasing number of people spend a great deal of time watching television, reading newspapers and magazines, playing records and listening to the radio. In some countries, for example, children already spend more time watching television than they do attending school.

Rather than condemn or endorse the undoubted power of the media, we need to accept their significant impact and penetration throughout the world as an established fact, and also appreciate their importance as an element of culture in today’s world. The role of communication and media in the process of development should not be underestimated, nor the function of media as instruments for the citizen’s active participation in society. Political and educational systems need to recognise their obligations to promote in their citizens a critical understanding of the phenomena of communication.

Grunwald, Federal Republic of Germany, 22 January 1982
McLuhan and Media Literacies

“The new mass media - film, radio, TV - are new languages, their grammar as yet unknown.”

John Culkin
“Be the Arrow, not the Target!”

Within the next few years, decisions will be taken or fail to be taken which will to a large extent determine which of these possible roads we are likely to take, for the remainder of this century. But if action is necessary now, its first conditions are information, analysis, education, discussion, to which this book is offered as a small contribution and, it is hoped, an incentive.

Raymond Williams, Preface Sit Down and Be Counted (1969)
Media Literacy and the Broadcasting Act 2009

The Broadcasting Act 2009 provides a new role for the Broadcasting Authority of Ireland (BAI) (http://www.bai.ie/) in promoting Media Literacy. Under the Act the BAI are given ancillary functions to encourage and foster research and to undertake measures and activities which are directed towards the promotion of media literacy.

The Act also provides that the Broadcasting Funding Scheme may support new television or radio programmes to improve media literacy.

Media Literacy is formally defined as follows;

“media literacy” means to bring about a better public understanding of:

(a) the nature and characteristics of material published by means of broadcast and related electronic media,

(b) the processes by which such material is selected, or made available, for publication by broadcast and related electronic media,

(c) the processes by which individuals and communities can create and

Uneven digital skills

The bar chart shows the percentage of children who can perform various digital skills. The skills are listed on the x-axis, and the percentage on the y-axis. The countries are listed on the bottom, with the percentages for each country shown. The chart highlights that there are significant differences in digital skills across different countries and skills.
Critical Media Literacy in Ireland (DIT/DCU/ Radharc Trust, 2007)

1. A study of theoretical models and international best practice in promoting critical media literacy, in particular among younger people;

2. A survey of current practices in media literacy training and media education in second-level schools, within formal curriculum and in individual teaching practices of schools and teachers; and

3. Discussion and recommendations on initiatives to promote media literacy in Ireland.
MAIN FINDINGS

- Media Education is not uniformly available and/or supported in all schools.
- Media Education is hampered by low status and considered to be a ‘soft’ subject.
- Media Education as it currently exists across the curriculum is unstructured. While this offers some advantages in allowing freedom to teachers to develop new innovative practices, it undermines the overall coherence of media studies as a subject.
- Community-based initiatives do not generally receive recognition nor are there serious attempts to leverage their potential – resources, expertise, methods etc.
- A lack of research and funding for specifically Irish contexts seriously undermines any attempts at gaining credibility or inspiration.
- There is a low rate of collaboration between schools, community and industry.
- There is no ‘ownership’ of Media Education and a vital need for it to be endorsed.
1. A revised and coherent rationale for media literacy in Irish education needs to be developed that takes into account its contemporary relevance and wider social context.

2. A curriculum strategy needs to be developed that takes into account its current disjointed nature and seeks to develop a more holistic, integrated approach.

3. Stakeholders within the field of media education and media literacy need to collaborate to ensure a higher profile for the subject and to enhance its status.

4. Responsibility for the development of media literacy needs to be assigned and individual roles within the field need to be mandated.
MEDIA LITERACY AND THE PUBLIC SPHERE 2008
AIMS

of policy and relevant academic literature;

• Current trends in media literacy thinking via an interview-based survey of international experts in the field

• Public attitudes towards media literacy in Ireland via a series of focus groups.
Recommendations

Research: A media literacy dimension be identified within each of these respects, frameworks and strategies should be an overarching framework for gathering information on the emerging communications landscape.

Industry support: In order to mainstream media literacy as an essential component of participation in the communications market place, mechanisms should be identified to require media organisations to support media literacy initiatives.

Information exchange: A key element in developing effective media literacy strategies is information sharing both at a national and
Recommendations

Expert group: formation of an Irish media literacy expert group to advise on definitions, strategies, and new developments. Such a group should comprise national experts and key stakeholders within the media literacy field.

Partnership support: support for such civil society/cultural and educational organisations...in order to place media literacy provision on a sustainable footing... Including dedicated support from funds as, for example, defined in Broadcasting (Funding) Act,
