Watch the birds

Last winter, London Bird Survey (December to February), run by BirdWatch Ireland, found the number of birds that returned to Ireland in 2016-17 was the highest recorded since 1995. During the surveys, which are conducted twice a year in late February and early March, the number of birds counted was 3.8 million. The highest number of birds counted was 8.6 million, which was recorded in 2001.

Tory groups are beginning to lose their support on renting, but this is less evident in the Labour movement. Support is also falling in the Independent movement.

State must play to crowd on renting or face the consequences

In 1985, the French polymath Émile Durkheim published his seminal work, *The Division of Labour in Society*. The book examines the relationship between society and individuals, and is often considered a foundational text in sociology. Durkheim was one of the first sociologists to study social cohesion, and his work has had a lasting impact on the field.

Durkheim argued that society is held together by social cohesion, which is the feeling of belonging that individuals have to the larger social group. He identified two types of social cohesion: mechanical solidarity and organic solidarity. Mechanical solidarity occurs in small, isolated communities where everyone knows each other and has a clear understanding of their roles and responsibilities. Organic solidarity occurs in larger, more complex societies where people have different roles and responsibilities, and social cohesion is maintained through a system of regulations and laws.

Durkheim's ideas have been influential in the development of sociology, and his work continues to be studied and debated by scholars today. The book is considered a classic of sociological thought, and has had a significant impact on the field.
