Recommended Citation
The aim of this project is to promote academic integrity and ensure that students are educated and supported in the ethical use of information through the design and development of two online learning tools on how to reference appropriately and avoid plagiarism.

The tutorials provide users with flexible, 24/7, self-paced online support which enable them to learn independently. They have been embedded into undergraduate modules in ITT Dublin in the academic year 2010/11 and usage has been excellent with over 750 students having completed the tutorials by the end of February 2011. Feedback from users is being captured via an online survey tool at the end of the tutorials; this will help inform future tutorial development.

These reusable learning objects are hosted on ITT Dublin’s library website, the Institute’s VLE, Moodle and the NDLR.
