Online Literature Review Tutorial

Information literacy, academic teaching and learning support

Institute of Technology Tallaght
www.ittdublin.ie

Participant(s)
Philip Russell

Description
The aim of this project is to introduce all students to the literature review concept and provide them with an understanding of how to write up the literature review through the design and development of an online learning tool.

The development of this tutorial provides users with flexible, 24/7, self-paced online support which enable them to self direct their own research and learn independently.

This pedagogically sound and technically robust reusable learning object is hosted on ITT Dublin’s library website, the Institute’s VLE, Moodle and the NDLR. This learning object has been embedded into undergraduate modules in ITT Dublin in the academic year 2011/12. Usage has been excellent - by end of February 2012 over 300 students have completed this tutorial. Feedback from users is being captured via an online survey tool at the end of the tutorials. This feedback will inform future tutorial development which may include audio / translation.

Resources
Interactive Online Tutorial (SCORM Compliant)

Development
Articulate software Studio 9

Completion
Completed in September 2011
